

Best practices in academics/teaching-learning by Dr. M. P. Khond

The innovative teaching learning has always been encouraging teachers and students both to explore research and use all the tools to uncover something new. The faculty at Mechanical Engineering does regularly practice innovative teaching learning using different pedagogy. Few of such pedagogical approaches are explained here.

The online teaching is helpful in many ways. It is more convenient and productive for both students and teachers as it increases flexibility of time, location, context etc. It enhances the student learning experience by providing opportunities for cross-disciplinary, cross-cultural and/or cross-campus collaborations. Some of the videos shared on YouTube for course industrial engineering for Final year B.Tech students are as follows:

- Concurrent Engineering
